

PROJECTINA

VISIONX

The new VisionX **Motorized Universal Holder** provides precise, motorized rotation on three axes using the included SpaceMouse® controller or via software.

Motorized Efficiency and Ergonomic Comfort

> **Faster, more efficient examination**

Intuitive, motorized control of rotation, tilt and twist of bullets or cartridge cases. Examination is seamless, without ever looking away from the binocular or screen.

> **More comfortable examination over longer periods**

The Spacemouse controller allows the examiner to maintain ergonomic hand, wrist and elbow position, completely eliminating uncomfortable upward motion to manually rotate evidence.

Universal Control

- › Accepts other VisionX mounting accessories such as brush mounts for cartridge cases and plasticine mounts for fragments.
- › Includes a range of BULLETRAX-compatible magnetized tips in different sizes.

Freedom of Movement

Six degrees of freedom with precision, motorized control of evidence:

- › **Rotate** a bullet or cartridge case surface in a full 360 degrees
- › **Tilt** to adjust for reflectance and examine uneven surfaces such as damaged bullets and fragments
- › **Twist** to line up rifling marks and other striations
- › **Translate in X and Y** planes with the joysticks to position evidence
- › **Focus** using coarse, fine and super fine controls

Control all rotating axes smoothly and intuitively with the Spacemouse controller, and easily synchronize left and right sides to rotate evidence simultaneously.

Efficiency

- › One-touch button to jump to the next LEA/GEA on a bullet to confirm matching areas more quickly and easily.
- › Orient cartridge case headstamp according to established protocols, and store the position to return after viewing other regions of interest.
- › Tilt cartridge case, and rotate the surface area to view extractor and chamber marks.

Remote Collaboration

- › Allows remote-operator complete control over evidence rotation and positioning.
- › Less local-operator manipulation allows for seamless remote confirmation of bullet or cartridge cases matches.
- › Facilitates training opportunities and peer reviews.
